

Case Study: Waste management solutions for the Clegg Group Ltd

In brief

Ward is a preferred supplier of national waste solutions and skip hire services for Clegg Group Ltd which includes both Clegg Construction and Clegg Food Projects.

Ward supports Clegg Group Ltd across the UK with managing their waste and diverting a high percentage of mixed construction waste from landfill sites.

Services include construction waste clearance, metal, wood, plasterboard and soil recovery, as well as helping projects attain building accreditations through SmartWaste management.

Maximising recycling

All waste collected from Ward's direct service in the East Midlands is transferred back to Ward's modern material recycling facilities in Ilkeston, Swadlincote and Chesterfield where it is processed for recovery.

Projects which are outside Ward's direct service sites are managed by Ward's nationwide cross hire department. This approved network of partners reciprocates service levels and meet environmental objectives, providing UK wide coverage.

Ward recently provided waste management services to a local project collecting over 1,000 tonnes of mixed and segregated waste, 90 per cent of this was diverted from landfill.

Cost effective waste management

When Clegg Group Ltd secures a new construction project, Ward advise on the most cost-effective waste management options. This includes advice on which containers to use, types of waste stream and frequency of collections required.

Each site can generate different waste types and challenges, including hazardous waste such as oils, asbestos or Japanese knotweed. Ward can also arrange a site visit to find a safe and environmentally friendly solution for multiple waste streams.

Smart solutions

Ward has delivered a total waste solution service for multiple projects across the Clegg Group Ltd, including at a new state-of-the-art car show room in South Yorkshire valued at over £15m. Ward provided SmartWaste reporting for this project, compiling waste data and generating a comprehensive waste report at the end of the project. The report helped to attain the required accreditations for BREEAM.
